

SMART Board™ 8070ie interactive display

It's all about collaboration

Elegant, intuitive and easy-to-use, the 8070ie display facilitates an interactive collaboration experience that can be rapidly adopted by your team. This rapid adoption helps facilitate increased understanding, faster and more informed decision making and energized participation with co-workers, whether they are in the same room or joining from remote locations.

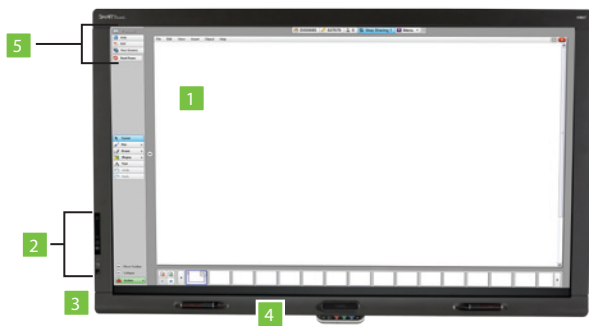

The 8070ie display enhances the way your teams work together, leading to increased effectiveness and efficiency for any business. With the press of one button, two or more people can immediately begin brainstorming through on-demand functions like whiteboarding, web browsing and PDF viewing. And its ease-of-use, full integration and reliability accelerate your team's adoption of it into everyday processes. The 8070ie features a touch-enabled 70" LCD flat-panel display that shows high-definition images.

Discover new ways to drive business productivity

Collaboration sessions can begin immediately on the 8070ie. Team members can hold interactive brainstorming sessions using the whiteboarding function, browse the Web and view PDFs. All meeting notes and annotations can be saved to a pre-configured network drive, a USB flash drive or a connected laptop, and they can also be distributed via e-mail. And it's easy for remote participants to join in on these sessions in an interactive way. These benefits, combined with its ease-of-use, help to facilitate your teams' rapid adoption of the 8070ie and increase their productivity.

Enhanced security, reduced system maintenance

The 8070ie is fully integrated and appliance-based, designed for environments without an in-room computer or where there is little reliance on IT support. Its simplified, on-demand functions, quick and easy laptop connection and locked-down system design minimize IT support requirements and increase reliability. And while meeting notes can be saved anytime to a network location or a USB flash drive, or distributed via e-mail, the system does not keep any residual data, preventing those in a meeting room from accessing confidential information from previous meetings.

- 1 SMART Board 8070i interactive display – a multitouch, interactive, high-definition 70" (177.8 cm) LCD display that enables two users to simultaneously write, erase and manipulate content
- 2 Integrated control panel – includes volume control, input source switching and power button
- 3 USB and HDMI ports – connect laptops and other peripheral devices to easily accessible ports
- 4 Multiuser Pen Tray – the advanced Pen Tray automatically detects tool modes, and a clean, simple design integrates the pens unobtrusively into the panel frame
- 5 On-demand functions – begin collaboration sessions immediately after turning the system on by having instant access to whiteboarding, web-browsing and PDF-viewing functions

Features

Intuitive on-demand functions

Easily access whiteboarding, web-browsing and PDF-viewing functions immediately after turning the system on.

Natural user interface

Simply touch the interactive display with your finger – no special tools required. One person can use two fingers to gesture, or two people can touch at one time.

Commercial-grade, touch-enabled display

The 8070i is a 70" commercial-grade high-definition display powered by SMART's proprietary DVIT™ (Digital Vision Touch) technology, delivering a superior touch experience and bright, crisp 1080p images that make it easy to present and work with complex data.

Elegant, sophisticated design

The professional design and crisp, eye-catching visuals of the 8070ie make it perfect for any high-end workspace.

Freestyle interaction

Two people can work together anywhere on the interactive display. It's a seamless, natural experience – just start writing or moving objects.

Touch gestures

Convenient, creative shortcuts for working with content include one- and two-finger navigational gestures (e.g., panning, flicking pages), object gestures (e.g., zoom, toss, rotate) and other gestures supported by multitouch operating systems.

Object awareness

Enables natural movements that close the gap between the physical and digital worlds. The interactive display automatically recognizes when you switch between using a finger, pen or eraser. You can even use your fist as an eraser, just as you might on a blackboard.

SMART Ink™

Just pick up a pen and start writing. It's a natural, accurate and smooth writing experience. SMART Ink intelligently smoothes user's handwriting to improve legibility and supports annotation over any application. Inject digital ink as text or images into Microsoft® Office applications and Adobe® Acrobat® Professional.

Dual-user pens

Pick up one of the pens or the eraser, and the 8070ie display automatically detects which tool you've selected. Control buttons select the color and launch the On-Screen Keyboard, right-click and help functions.

Specifications

Size

66" W x 41" H x 8 1/2" D
(168.5 x 103.7 x 33.6 cm)

Interactive display surface area

70" (178 cm) diagonal, 16:9 format
61" W x 34 1/4" H
(154.9 x 87.2 cm)

Weight

268 lb. (122.6 kg)

Shipping size

1 unit on a pallet – 22 1/4" W x 54" H x 78" D
(57 x 139 x 198 cm)
2 units on 3 pallets – 45" W x 59 3/4" H x 78" D
(114 x 152 x 198 cm)

Shipping weight

1 unit on a pallet – 345 lb. (156.5 kg)
2 units on 3 pallets – 735 lb. (333.4 kg)
